It can save time, increase accuracy, and create documents that are less prone to errors. Since the release of AutoCAD 2013, VBA is not available in the standard AutoCAD applications. If a user creates a new drawing using a copy of an existing drawing, their VBA code is not incorporated into the new drawing. In AutoCAD 2014, users who create new drawings using an XREF file can have their VBA add-on automatically imported, which can reduce time and errors. In AutoCAD LT 2012 and newer, the following software is available to create a sandbox solution that creates a runnable application in the form of a.MPS (Microsoft Windows Package). In AutoCAD 2012, VBA is available in the standard AutoCAD applications, but it requires licensing. AutoCAD 2013 introduced macros as a language based on Visual Basic. Dynamics and flexibility of PEGylated-gelatin-cell-derived particles by controlling the growth of electrospun gelatin fibers. This study reports a rapid, simple, and low-cost method to tune the growth and fiber orientation of gelatin fibers by the addition of poly(ethylene glycol) (PEG) in the spinning solution. PEGylated gelatin (PEG-gelatin) fibers were prepared using electrospinning at various concentrations of PEG and were then cross-linked by carbodiimide treatment to yield gelatin microbeads with average diameters between 5.1 and 10.7 μm . The results indicated that the fiber diameter increased from 0.32 to 1.27 μm and the bead diameter increased from 4.8 to 10.3 μm upon increasing the PEG content from 0 to 30 wt %. The growth and orientation of the gelatin fibers strongly depended on the PEG content during the electrospinning process. The addition of PEG during the spinning process suppressed the formation of zigzag fibers, such that only straight fibers were obtained without using any templates. In addition, the formation of gelatin microbeads with different surface morphologies (flower-like, plate-like
