By default, files from subfolders are excluded, and this option can be activated with one click. Moreover, you can ask the utility to get basic information about MP3 audio tracks (duration and bit rate). The file listing is immediately generated in the main window, and you can select the columns to show between size, date, duration and bit rate, as well as sort all items by any column. Copy or export file lists It's possible to copy to the Clipboard all shown data or just the one of selected files (in tab-delimited CSV format).
