SURF FIND is a lightweight and straightforward application, designed to help you find certain keywords by scanning any number of files in a single operation. It is easy-to-use and displays search results in separate tabs, allowing you to manage multiple jobs at the same time. Search for text in any number of files When setting up a job, you can select which folders should be scanned. Then, you can include or exclude certain files, based on their names or formats. Finally, you need to specify which keyword the application should search for. If you perform multiple search operations, the results for each of them are

displayed in separate tabs, allowing you to quickly switch between jobs. SURF FIND can also cache information, so that future searches involving the same set of files can be performed faster. Recent search parameters are saved by the application, enabling you to perform similar queries without having to enter all the necessary information again.

Analyze search results Each results page displays a list of all the files that match the search criteria, as well as the number of text lines and columns they consist of. Their content can be examined in a separate panel, where the application highlights the matching keywords. If the program has found a file that

needs to be copied to another location, you can simply drag it from the results page to any directory on your computer. This allows you to avoid having to manually navigate to the file's current location. Features a simple interface, but lacks sufficient documentation SURF FIND offers a minimalistic interface that makes it easy to locate and access all the program's primary functions. However, the included documentation is rather basic. While most of the application's features are self-explanatory, some of the more advanced ones may be difficult for novices to understand. To conclude, SURF FIND is a lightweight piece of software that can be used to locate

text in various types of files. It offers numerous filtering options, displays results in separate tabs and allows you to analyze data in a built-in text viewer. SURF FIND provides a suite of tools to help you find and extract information from your digital files. Its intuitive user interface and quick search mechanism allow you to quickly locate data in the source text. Once this data is found, SURF FIND can extract the information by using its own proprietary algorithms. SURF FIND works with a wide variety of file types and supports a wide variety of fields. It can also
