I've managed to get this working perfectly: However, on this log I'm using the upper 8 points of my data (that's why it's z values are 0-8) which I'm assuming is where my problem is. I've been running circles around this one. The bars are just zeros, I'd like to have them show 0-5 but I can't work out why they're all suddenly showing 0-2. Here's my data and the log: A: All you need is to split the x and y values before the call to g. Something like this (notice that this would produce just four bars, the last set being longer): var w = 350; var h = 100; var x = d3.scaleLinear() .domain([0,100]) .range([0,w]); var y = d3.scaleLinear() .domain([0,100]) .range([h,0]); var xAxis = d3.axisBottom(); var yAxis = d3.axisLeft(); var svg = d3.select("#mySVG") .append("svg") .attr("width", w) .attr("height", h); var g = svg.selectAll(".data") .data(d3.range(0,8))

Small and handy tool for searching, batch renaming or scanning specific items on Windows 7. Win7 X Folder User Review: Win7 X Folder is a small tool that can be used to scan, rename and/or search for files or folders on Windows 7. It can be used directly from USB drives to quickly perform any task on the system. As the name implies, the app lets you perform file search and/or batch rename of specific items on your hard drive. Find a file on your PC by specifying the search mode (case sensitive or not, in the file names or inside data), the folder where the target should be found, the date to include and optionally the file type. Searching for folders can be done in a similar way; the main difference is that you can also set the folder type (folder, hidden or system). The batch renaming tool supports file and folder type switching (including system folders). Thus, you can easily replace the file name by a new one, or simply replace the extension. The tool lets you give some conditions to the renaming process. Thus, you can set the date range, include or exclude files or folders, set the file and folder names or only the data, switch on or off the case awareness or perform both actions at once. The mass renaming tool offers several renaming rules; you can replace, change, add or remove characters, as well as set the program to rename files, folders or both types of items. Last but not least, you can save the search list to the TXT or CSV format, as well as make the app save the full path of file and folder names, along with the date of creation and last modification for each entry.
